User:ServiceNowFormUser SAYS

- I want to complete the form without errors.
- I need to know which fields are required.
- I want clear messages when I enter incorrect information.
- I do not want to fill unnecessary fields.

THINKS

- Which fields should I fill?
- Is the information I entered correct?
- Why did this field become mandatory?
- Why is this field hidden or read-only?

DOES

- Open the ServiceNow form.
- Enter information in the required fields.
- Change field values based on the given conditions.
- Submit the form.
- Correct information when validation errors are displayed.

FEELS

- Confused when required fields are not clearly identified.
- Frustrated when incorrect information is entered.
- Confident when clear validation messages are provided.
- Satisfied when the form responds automatically to user actions.

PAINS

- Incorrect or incomplete data entry.
- Unclear mandatory fields.
- Unnecessary fields displayed on the form.
- Difficulty understanding validation errors.
- Static form behavior.

GAINS

- Simple and clear form interaction.
- Automatic validation of user inputs.
- Dynamically displayed or hidden fields.
- Clearly identified mandatory fields.
- Improved data accuracy and user experience.

USER GOALS

- Complete the form correctly.
- Avoid invalid data entry.
- Understand which fields are required.
- Receive clear validation messages.
- Complete the form efficiently.

KEY INSIGHT

ServiceNow users need a simple and interactive form that validates their information and dynamically controls fields based on their actions.

SOLUTION DIRECTION

Client Scripts can be used for client-side validation and dynamic processing, while UI Policies can be used to control field visibility, mandatory status, and read-only behavior.
